

Risk Management

Risk management is the foundation for conducting a sustainable business in order to increase shareholders value while being social responsible. The Risk Management Policy is established by the Risk Management Committee (RMC) to systematically manage the various aspects of risks in alignment with the business strategy. The RMC plays an important role in deliberating the scope of the policy and methodology to ensure that the risk level is within acceptable Risk Appetite. In addition, the Company has developed tools and processes as well as defined roles and responsibilities of involved parties to ensure consistent control and monitoring of corporate risks and response to changing circumstances.
